Mohinder Kumar Slariya

Black Night **A Psycho-traumatic Analysis** **of DAM Affected People**

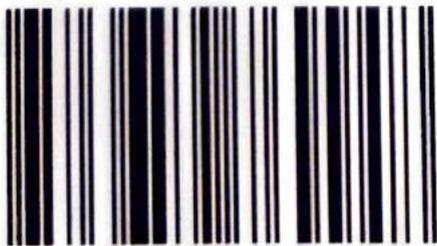

LAMBERT
Academic Publishing

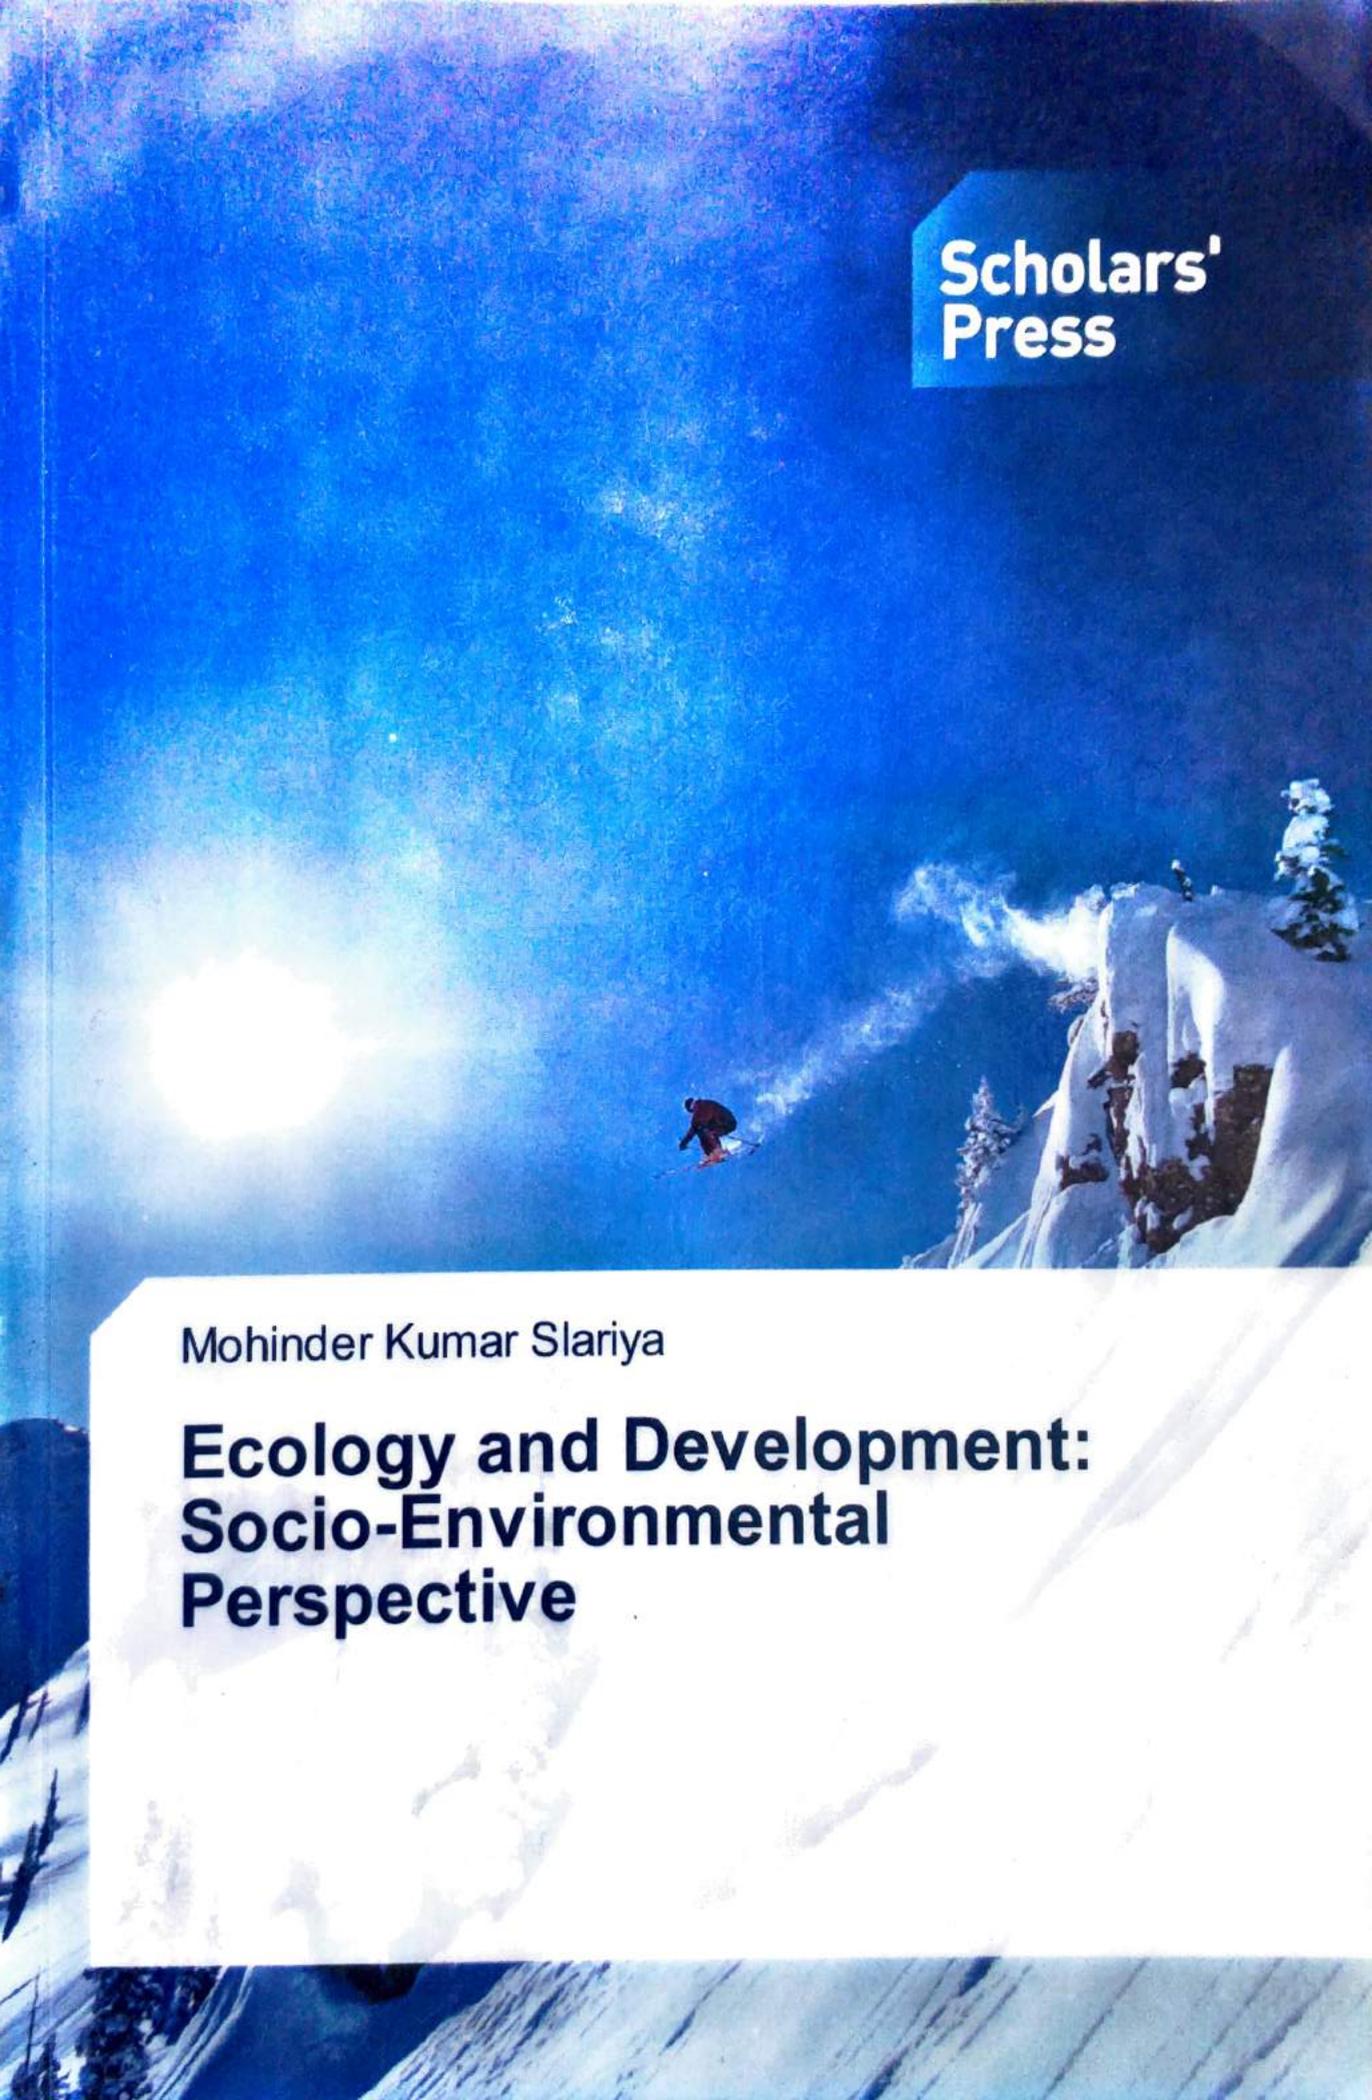

It was the Black Mid-night of the winter of 1994 when suddenly the water level of Ravi arouses and everything starts drowning in the reservoir of Chamera-I. In that situation nobody was in position to understand what actually was happening. In this doldrums situation everybody was running, there was hue and cry all around in the area, everybody was running with their belongings on their heads, children in their hands and cattle being driven by their owners, nobody was recognizing anybody. In this effort, the psycho-traumatic analysis of the dam affected people has been made at micro level and the findings can be generalized in global perspective. The findings and recommendations thereof can be of a great help to the concerned persons who are in the process of policy making in such types of developmental projects round the globe. People living in the vicinity of Power Project (Non-PAP) and oustees (PAP) have been interviewed in upstream and people in downstream has also interviewed to see it's impact on social fiber.

Dr. Mohinder Kumar Slariya is presently working as Associate Professor at Govt. PG College, Chamba, affiliated to HP University, Shimla. Dr. Slariya has been fellow of Academy of Finland (2011-2015) and completed his Post-doc from University of Turku, Finland. He has been actively involved in primary research for more than a decade.

978-3-659-76994-8

The background of the cover is a photograph of a snowy mountain landscape. A bright sun is visible in the upper left, creating a lens flare effect. A skier is captured in mid-air, performing a jump against the clear blue sky. The snow-covered peaks and ridges of the mountain are visible on the right side of the frame.

**Ecology and Development:
Socio-Environmental
Perspective**

Ecology and Development: Socio-Environmental Perspective

This book is an attempt to highlight human dimension of development and will highlight it's interactive ecological relationship. Since development has been planned for the better livelihood conditions of the people and to give pace to it technological intervention has been introduced quite long ago. But with the coming up of developmental projects of any magnitude human dimension has always been ignored which resulted into the unresolved problems of the day. The problems are in form of climate change, unscientific extraction of natural resources, ignorance of human aspects, failure of environmental impact assessments, failure of afforestation drives etc. are few to count. These failure are questioning the existing model of development and also questioning the ecological interactive relationship between human being and developmental initiatives. How disturbed interactive relationship can be restored by introducing new model i.e. Benefit sharing participatory model is the sole purpose behind this academic attempt.

Academically Sociologist and Environmental Sociologist by training and expertise, Dr. Slariya is presently working as Associate Professor of Sociology in the Department of Higher Education, Govt. of Himachal Pradesh. He has been Post-doc fellow of University of Turku, Finland.

Culture Development and Society

Understanding Development in Relation to Culture

Edited by
Mohinder Kumar Slariya
Sachin Kumar

About the Book

Culture being one of the main pillars of development and sustenance of communities can be seen as reason for any progress in society. It is the identity where common values, attitudes, preferences, knowledge are attributed in the behaviour of the people of a particular social group, and has a positive influence on social development in any country. Culture is the cornerstone of development and fundamental to understand society from different perspectives.

Culture can be seen working in celebrations, like; *wedding, a harvest festival, a religious holiday, or a national observance*, our celebrations are woven tightly into our overall cultural identity. Hence, can be stated that to understand society at different levels, culture is required for well-functioning of society which is essential for critical debate and the exchange of ideas on the one hand, and on the other, the identity of any individual is being expressed through culture in the process of human development. Largely, culture creates the *fundamental building blocks in our personality* and it further link these with communities and nations.

To a great extent, the *quality of our lives depends* on the benefit of our culture. The culture is the mirror of society and the rich tradition can be seen in form of our connections with historic and rich heritage, language, music, arts and literature etc., which accompanied us throughout our life, is fundamental for our unity by providing a sense of *who we are*. Culture consists of the beliefs, behaviors, objects, and other characteristics common to the members of a particular group or society. Thus, culture includes many societal aspects; *language, customs, values, norms, mores, rules, tools, technologies, products, organizations, and institutions etc.*

Sociologists define society as *the group of people who interact in such a way as to share a common culture. The cultural bond may be ethnic or racial, based on gender, or due to shared beliefs, values, and activities*. The term society can also have a geographic meaning and refer to people who share a common culture in a particular location. Culture and society are intricately related. A culture consists of the *objects of a society, whereas a society consists of the people who share a common culture*.

By considering above facts, the first conference of Sociological Society of Himachal Pradesh was organised on the basis of three most important and inter-woven concepts; *culture, development and society* in the month of November, 2019 at Govt. College Chamba. For this conference more than 100 papers were received and out of those papers, 22 papers selected for the publication in form of edited book.

We are expecting that, this book will open a new inter-disciplinary debate in academic arena and prove beneficial for the readers across the subject sociology. This is also an attempt to touch three most important dimensions; culture, development and society in reciprocal relationship.

With warm regards.

The cover features a composite image. The upper portion shows a vast, blue-toned glacier with a jagged mountain range in the background under a cloudy sky. A thick, dark blue wavy line separates this from the lower portion, which shows a wide, braided river delta with multiple channels and islands of sediment, set against a green landscape under a clear sky.

Water and Development

A Composite View

Mohinder Kumar Slariya

The book is an attempt to highlight issues related with one of emerging problems of the day. The book is the outcome of National Conference entitled, "Sustainable Use of Water Resources in Context of Climate Change: A Shared Responsibility" popularly known as Chamba water Meet-2011 which was a sponsored conference by UGC and papers presented in the conference have been edited and available in form of this book. The book is expected to be beneficial for the professors, researchers, students, policy makers and policy executors in water, environment and related sectors. The scientific observations made by the contributors from India as well as from Nepal, will help the policy makers to understand these issues at minute level. Views expressed here are of contributors not of mine, I just provide them platform to present their work before you all with a hope that it will prove beneficial to all readers.

90000 >

A close-up photograph of a woman with voluminous, curly brown hair. She is looking downwards with a thoughtful or serene expression. Her right hand is raised towards her face, with fingers slightly curled. The background is bright and out of focus, suggesting an indoor setting with large windows or a bright light source. The overall tone is contemplative and intellectual.
